Summary

Front-end focused software engineer with 6+ years of experience building scalable, customer-facing web applications. Expert in React and modern UI systems, with a strong track record of delivering high-impact features at AWS and Oracle. Skilled in driving cross-functional collaboration, improving developer velocity, and building accessible, performant interfaces.

Experience

Oracle — Senior Software Developer

Aug 2022 – Sept 2023

- Partnered with backend engineers to define API contracts and data models for Oracle Alloy Operator Console (enterprise cloud platform)
- Led design and implementation of UI workflows enabling operators to manage pricing lists and rule configuration
- Mentored junior engineers and drove team execution through code reviews and stand-ups
- Built cross-browser end-to-end testing and canary deployments to ensure production reliability
- Led VPAT accessibility review and implemented inclusive UI standards

Automox — Senior Software Engineer

July 2021 – Jan 2022

- Led end-to-end design and requirements for new product initiative, aligning cross-functional stakeholders
- Architected and implemented REST services using Spring Boot with scalable PostgreSQL and DynamoDB data models
- Drove migration toward microservices architecture by integrating new services with existing platform systems

Amazon Web Services — Front-End Engineer

April 2018 – June 2021

- Developed React-based web applications for AWS Elastic Beanstalk console, used by hundreds of thousands of customers
- Designed reusable, framework-agnostic UI components adopted across multiple AWS services
- Led adoption of shared component libraries to improve UX consistency and development velocity
- Owned deployment pipelines and improved test coverage with Cypress automation

Amazon — Software Development Engineer in Test

July 2017 – April 2018

- Designed and maintained scalable Selenium-based automation frameworks for Kindle storefront testing
- Built serverless test reporting platform using Lambda, API Gateway, and DynamoDB
- Improved release reliability through robust testing systems and CI

JPMorgan Chase — Application Developer

July 2016 – July 2017

- Developed customer-facing web components using JavaScript, CSS, and Node.js
- Improved developer workflows by evaluating and introducing modern testing and tooling solutions
- Delivered production features through CI/CD pipelines using Jenkins and Nightwatch.js

Projects & Professional Development

- Built williapa.github.io/glinski, a serverless real-time multiplayer chess platform designed for live-stream interaction
- Explored AI-assisted development workflows, applying test-driven development to front-end systems
- Created and published music and video visualizers, strengthening design and artistic intuition
- Conducted independent research in financial markets and personal investing

Education

The Ohio State University — B.S. Computer Science, 2016
